

Performance Testing

Date	20 june 2026
Team ID	SWTID-2026-9290
Project Name	A COMPHRENSIVE MEASURE OF WELL BEING
Maximum Marks	5 Marks

Performance Testing

Performance testing evaluates how your system behaves under expected and peak load conditions. Complete the sections below to document your testing approach, tools used, and results obtained.

Step 1: Testing Overview

Field	Details
Testing Tool Used	[e.g., JMeter, Locust, k6, Postman]
Type of Testing	[e.g., Load Testing, Stress Testing, Spike Testing]
Target Module / API	[Specify which feature or endpoint was tested]
Test Environment	[e.g., Local / Cloud / Hosted Server]
Test Date	

Step 2: Test Scenarios

S.No	Test Scenario / Description	No. of Virtual Users	Duration (sec)	Expected Outcome
1	User Login and Dashboard Access	50	300	100 concurrent users should be able to complete and submit the well-being assessment successfully. Average response time should be ≤ 3 seconds, 95% of requests should complete within 5 seconds, error rate should be $< 1\%$,

				and assessment data should be saved accurately without any data loss or system failure.
2	Complete Well-Being Assessment Submission	100	600	All users should be able to complete and submit the assessment successfully. Data should be saved correctly, response time should be under 3 seconds, and error rate should be below 1%.
3	View Well-Being Assessment Results	75	300	Assessment results should load accurately within acceptable response time without data loss or errors
4	Peak Load Test (Multiple Users)	200	900	The application should remain stable under peak load with no crashes, response time within acceptable limits, and successful processing of user requests.

Step 3: Performance Test Results

S.No	Metric	Target Value	Actual Value	Status (Pass / Fail)	Remarks
1	Response Time (Avg)	< 2 seconds	1.3sec	pass	Meets target
2	Response Time (Max)	< 5 seconds	3.8 sec	pass	With in acceptable limit
3	Throughput (Req/sec)	100	120 sec	pass	Good performance
4	Error Rate	< 1%	0.2%	pass	Very low error rate
5	CPU Utilization	< 80%	65%	pass	Resource usage is normal
6	Memory Utilization	< 80%	70%	pass	Memory usage is acceptable

Step 4: Observations & Analysis

Key Findings:

[Describe what the test results revealed about your system's performance]

Bottlenecks Identified:

[List any performance bottlenecks observed during testing]

Optimization Steps Taken:

[Describe any changes or optimizations made to improve performance]

Step 5: Screenshots / Evidence

Attach screenshots of your performance testing tool results below (e.g., JMeter report, Locust graphs, k6 output):

[Insert Screenshot 1 here]

[Insert Screenshot 2 here]
